AWS DEVOPS ENGINEER | CLOUD INFRASTRUCTURE | CI/CD AUTOMATION & Pipelines
Terraform | AWS | DevSecOps | System Reliability | Automation | AI-Assisted Engineering

SUMMARY

AWS-certified DevOps Engineer with 12+ years of experience supporting mission-critical systems, improving operational efficiency, and building automated infrastructure and deployment workflows. Proven ability to design and maintain CI/CD pipelines, manage AWS environments, and implement Infrastructure as Code using Terraform.

Hands-on experience across cloud infrastructure, deployment automation, monitoring, and system reliability, with a strong focus on reducing manual processes and increasing consistency across environments (Dev, UAT, Production-style).

Leverages AI-assisted development to accelerate troubleshooting, scripting, and infrastructure design while maintaining full control over system reliability, security, and deployment integrity.

CORE TECHNICAL SKILLS

Cloud & Infrastructure

AWS (EC2, S3, IAM, VPC, RDS, Aurora - exposure), Cloud Environments (Dev/UAT/Production), Cloud Migration Support

DevOps & CI/CD

CI/CD Pipeline Development (GitLab CI/CD, Jenkins), Git, Deployment Automation, Release Management

Infrastructure as Code

Terraform (advanced usage), CloudFormation (working knowledge), Infrastructure Automation

Containers & Orchestration

Docker, Kubernetes (kind, Kustomize), Containerized Deployments

Monitoring & Reliability

CloudWatch, Logging, System Monitoring, Performance Optimization, Uptime & Availability

Security / DevSecOps

IAM Policies, Secure Configuration, Access Control, CI/CD Validation, Basic Security Scanning Practices

Automation & Scripting

Python, Bash, Ansible, VBA

AI-Assisted Engineering

AI-assisted troubleshooting, script generation, pipeline optimization, and infrastructure design acceleration

PROFESSIONAL EXPERIENCE

DevOps Engineer

Niyaotech | IT & AI Solutions — Tysons, VA

Mar 2026 – Present

- Managed AWS environments across development and testing stages, supporting application deployments and infrastructure reliability
- Built and maintained CI/CD pipelines using GitLab CI/CD to automate build, test, and deployment workflows
- Provisioned and managed cloud infrastructure using Terraform, ensuring consistent and repeatable deployments across environments
- Supported application deployment workflows, improving release consistency and reducing manual intervention
- Monitored system performance and uptime using CloudWatch, logs, and metrics to proactively identify and resolve issues
- Applied IAM and cloud security best practices, ensuring secure access control and resource configuration
- Worked with Docker containers to maintain consistent deployment environments across systems
- Incorporated validation and automation into CI/CD pipelines to improve deployment reliability and reduce downstream failures

Technical Operations & Web Infrastructure Manager

Journey of You Counseling — Anniston, AL

2024 – Present

- Designed and managed website infrastructure, hosting, and domain configurations
- Built and maintained systems supporting client workflows, scheduling, and operational processes
- Managed web infrastructure and automation processes supporting business operations
- Implemented structured systems for data tracking, reporting, and workflow optimization

Technical Operations & Process Automation Lead

AerFlo Sports LLC — Oxford, AL

2013 – Mar 2025

- Led troubleshooting and resolution of system and infrastructure issues across technical environments
- Supported Windows-based systems, remote infrastructure, and network connectivity
- Developed automation tools using Python and VBA, improving operational efficiency by 25%
- Designed tracking and reporting systems to identify performance issues and improve system reliability
- Implemented SOPs and process improvements to reduce recurring system failures and improve consistency

CLOUD & DEVOPS ENGINEERING EXPERIENCE

Designed and implemented production-style cloud and DevOps solutions simulating real-world infrastructure, deployment, and automation workflows.

Technologies: AWS, Terraform, Docker, Kubernetes, Ansible, GitLab CI/CD, GitHub Actions

CI/CD Pipeline Engineering (GitLab CI/CD)

- Designed and implemented CI/CD pipelines including linting, automated testing, container image builds, and deployment validation
- Built container workflows using GitLab Container Registry and Kubernetes-based runners
- Implemented validation steps to ensure deployment quality and reduce release failures
- Improved deployment consistency and reduced manual intervention through automation

Infrastructure as Code (Terraform)

- Provisioned AWS infrastructure including networking, compute, and S3-hosted applications
- Applied Infrastructure as Code best practices including remote state management and modular architecture
- Enabled consistent, version-controlled deployments to reduce configuration drift

- Managed infrastructure across multiple environments to support scalable deployments

Containerization & Deployment Automation

- Containerized applications using Docker to standardize runtime environments
- Built automated deployment workflows using CI/CD pipelines
- Improved environment consistency across development and deployment stages

Configuration Management (Ansible)

- Automated Linux server provisioning and configuration using Ansible
- Deployed Docker environments on AWS EC2 instances
- Reduced manual configuration effort and improved system consistency

Kubernetes & Service Reliability

- Deployed containerized applications using Kubernetes (kind)
- Implemented health checks, service configurations, and observability practices
- Troubleshoot deployment issues using logs and kubectl

Observability & Incident Response

- Developed logging and monitoring workflows to improve system visibility
- Analyzed logs and metrics to identify system issues and performance bottlenecks
- Supported incident investigation and troubleshooting processes

AI-FIRST WORKFLOW APPLICATION

- Utilized AI tools to accelerate troubleshooting, scripting, and infrastructure design
- Applied AI for generating and refining Terraform configurations, CI/CD pipelines, and automation scripts
- Maintained full validation and control over all outputs to ensure production reliability and security
- Leveraged AI to reduce repetitive effort and improve development speed without sacrificing quality

EDUCATION

Gadsden State Community College - Associate Degree – Computer Aided Drafting & Design (CADD)

Technical, computer-focused program with emphasis on software systems and structured problem-solving

Clarusway DevOps Engineering Bootcamp (2025–2026)

- Intensive year-long program focused on AWS, CI/CD, Terraform, Docker, Kubernetes, and DevOps practices
- Built hands-on projects simulating real-world cloud environments and deployment workflows
- Focused on infrastructure provisioning, pipeline automation, and troubleshooting

ADDITIONAL TECHNICAL INTERESTS

- 3D Printing: Designed and produced functional components including fidgets and instrument parts
- Audio Engineering: Synthesizer-based music production and digital sound design
- Passion for building, experimenting, and working with complex technical systems
